

Transforming Heavy Logistics with Technology and Precision

Transporting a massive Ball Mill unit weighing over 118 Tonnes, spanning over 2,200 kilometers across road and sea was no small feat. What made this complex journey efficient, transparent, and insightful was the integration of axldrone's advanced tracking services throughout the project.

From the moment the unit left LNV Technologies in Trichy till its final destination, the TATA and TKM Global teams were consistently empowered with **real-time location tracking, predictive analytics, and intelligent alerts**. The axldrone's AI-driven platform helped us understand:

-  Idle durations and locations
-  Daily and hourly movement patterns
-  Geo-specific transit challenges
-  Route optimization opportunities

What truly stood out was their **Drone Video Documentation**, which visually captured every milestone and obstacle – an invaluable archive for logistics planning and review.

This project has not only been a benchmark in scale but also a testament to how **Technology can elevate heavy logistics with intelligence, safety, and confidence**. We wholeheartedly recommend **axldrone** to any organisation handling large-scale or sensitive transit operations. Their commitment to precision, visibility, and innovation is a **game-changer for the entire logistics industry**.
– TKM GLOBAL & TATA Project Coordination Team
